Illuminated Signs

Illuminated signs are a great option for when night time visibility is needed. We carry a full line of products that can be illuminated, including channel lettering, light boxes, halo-lit lettering and logos, illuminated awnings and electronic message centers.

- We use the latest L.E.D. technology for most of our illumination jobs.
- L.E.D.s are both long lasting and energy efficient, using just a fraction of energy when compared to older conventional lighting methods.
- Our halo-lit illuminated letters and logos can be fabricated in a variety of metals and materials, creating a substantial architectural element during the day, which transform into memorable and highly visible signage at night.
- Does your old illuminated sign need an upgrade? We are able to refurbish and retrofit your existing older style conventional signage with new L.E.D. technology, lowering operating and maintenance costs to save you money.
- For non-illuminated signs, such as carved and aluminum signs, we offer a full line of exterior lighting options, including gooseneck wall lighting, as well as in-ground up-lighting.
- When an off-the-shelf lighting product just won't do, we can custom fabricate a lighting system for any application.

Coupled with the latest L.E.D. technology, our illuminated signs are the perfect choice for memorable, highly visible outdoor signage. Let us design your next project, and see how a low maintenance, energy efficient illuminated sign can accelerate your business to the next level.

Channel letters. We can change both the face and side colors.

Full color L.E.D. sign panel. It can even do animations.

Halo-lit aluminum sign. L.E.D.s can come in a rainbow of colors.

Internally lit aluminum sign with pop-out lettering.
